Why did the model give this risk score?
Positive SHAP values push the model prediction toward churn; negative values push it toward staying. These are model influences, not proof of why a customer will leave.
Push toward churn

P03 · Price & Charges Concerns · score 0.421

Policy ID: P03 Category: Price & Charges Concerns Churn Reason (exact dataset values): Price too high, Extra data charges, Long distance charges Frequency: 181 cases (9.7% of all churned customers) Priority Level: MEDIUM-HIGH Related Policy: P01B (Competitor made better offer) - overlaps when the customer's price complaint is framed as a comparison to a named competitor rather than a standalone affordability concern; if a competitor was explicitly named, prefer P01B.

Use When (customer profile hints):

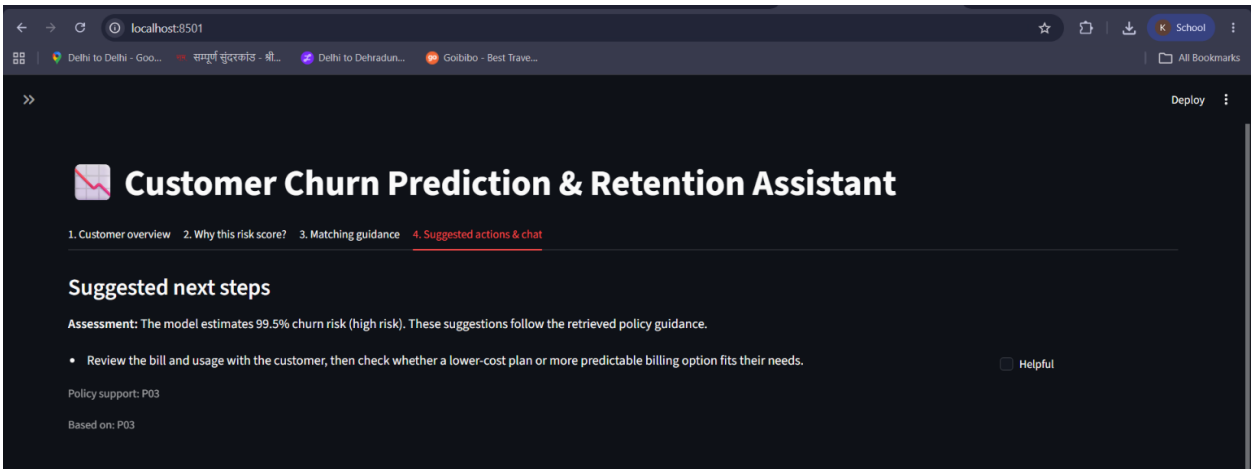

- Monthly Charge is above average for the customer's plan tier
- Total Extra Data Charges > 0 (for the "Extra data charges" sub-reason)
- Avg Monthly Long Distance Charges is high (for the "Long distance charges" sub-reason)
- No competitor was explicitly named in the complaint

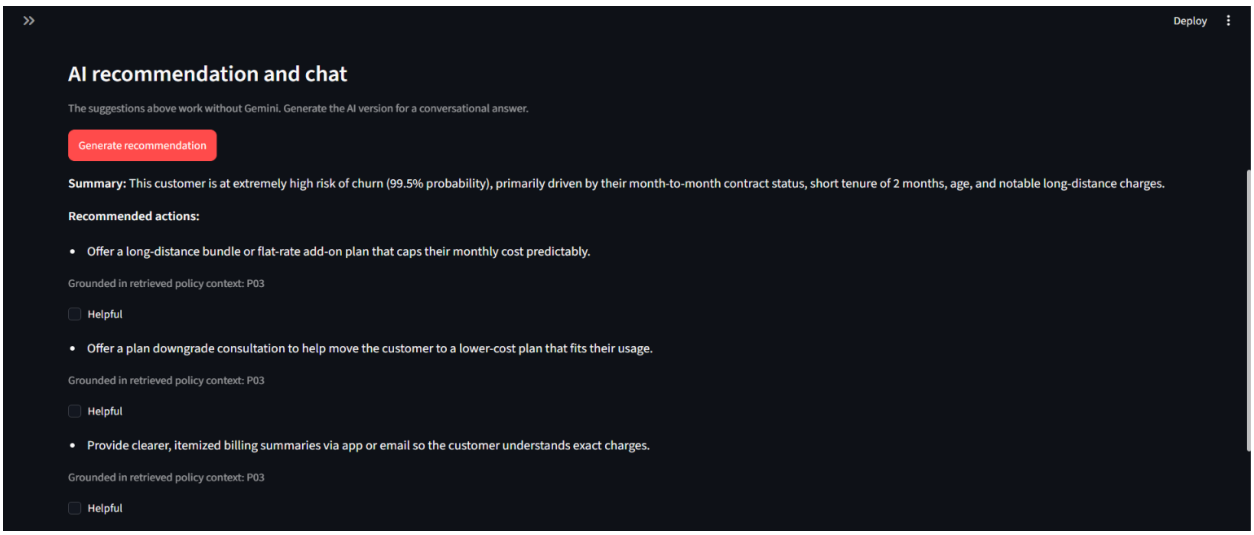

Problem Summary: These customers felt the overall cost of service - whether the base monthly price, unexpected extra data overage charges, or long-distance call charges - was too high relative to the value they were receiving. Unlike the competitor group, these customers may not have an alternative provider in mind; they simply felt the current pricing was unjustified or the billing was unpredictable, which erodes trust over time.

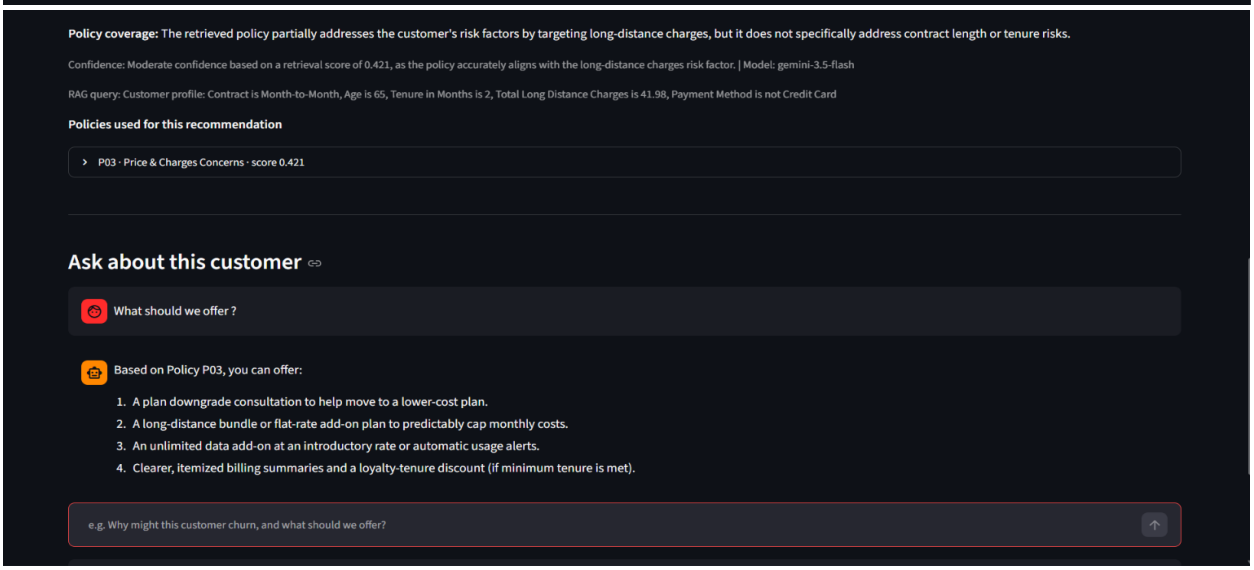

Recommended Retention Actions:

1. Offer a plan downgrade consultation - help the customer move to a lower-cost plan that still meets their actual usage needs, rather than losing them entirely.
2. For customers hit by extra data charges, proactively offer an unlimited data add-on at a discounted introductory rate (e.g., illustrative: reduced rate for the first few months), or set up automatic usage alerts to prevent future surprise charges.
3. For long-distance charge complaints, offer a long-distance bundle or flat-rate add-on plan that caps their monthly cost predictably.
4. Introduce a loyalty-tenure discount for customers who have been with the company for a defined minimum tenure (e.g., illustrative: 12+ months), reducing the "why am I still paying full price" churn trigger.
5. Provide clearer, itemized billing summaries (via app/email) so customers understand exactly what they're being charged for, reducing perceived unfairness.

Note: Specific discount percentages, thresholds, and timeframes in these actions are illustrative examples only, not figures derived from company data.

Generate recommendation
Summary: This customer is at extremely high risk of churn (99.5% probability), primarily driven by their month-to-month contract status, short tenure of 2 months, age, and notable long-distance charges.
Recommended actions:
Offer a long-distance bundle or flat-rate add-on plan that caps their monthly cost predictably.
Grounded in retrieved policy context: P03
Helpful
Offer a plan downgrade consultation to help move the customer to a lower-cost plan that fits their usage.
Grounded in retrieved policy context: P03
Helpful
Provide clearer, itemized billing summaries via app or email so the customer understands exact charges.
Grounded in retrieved policy context: P03
Helpful

Policy coverage: The retrieved policy partially addresses the customer's risk factors by targeting long-distance charges, but it does not specifically address contract length or tenure risks.
Confidence: Moderate confidence based on a retrieval score of 0.421, as the policy accurately aligns with the long-distance charges risk factor. | Model: gemini-3.5-flash
RAG query: Customer profile: Contract is Month-to-Month, Age is 65, Tenure in Months is 2, Total Long Distance Charges is 41.98, Payment Method is not Credit Card

Ask about this customer
What should we offer ?
Based on Policy P03, you can offer:
1. A plan downgrade consultation to help move to a lower-cost plan.
2. A long-distance bundle or flat-rate add-on plan to predictably cap monthly costs.
3. An unlimited data add-on at an introductory rate or automatic usage alerts.
4. Clearer, itemized billing summaries and a loyalty-tenure discount (if minimum tenure is met).
e.g. Why might this customer churn, and what should we offer?
